

# Novelty Library WebApp — Task Backlog

**Baseline:** NL\_WA\_1\_75

Legend:

- [x] = implemented in the inspected codebase.
- [ ] = follow-up / verification / improvement.

## P0 — Production integrity

### Build and deployment

- [ ] Run `npm run typecheck` on the exact deployment commit.
- [ ] Run `npm run lint` and resolve all production-relevant warnings/errors.
- [ ] Run `npm run build` and smoke-test the generated app.
- [ ] Verify all required Vite environment variables are configured in deployment.
- [ ] Verify Supabase redirect URLs match the production origin.
- [ ] Verify Vercel/static-host routing and hash deep links.

### Backend/security

- [ ] Audit RLS policies for every public/private/admin table referenced by the client.
- [ ] Confirm `is_admin()` cannot be spoofed by client state.
- [ ] Confirm all admin RPCs enforce authorization server-side.
- [ ] Confirm public analytics RPC exposes no private user information.
- [ ] Confirm storage policies for avatars/covers/stories/profile-question-images.
- [ ] Confirm profile-question image upload constraints are enforced server-side where required.

### Review lifecycle

- [ ] Verify pending → approved/declined → published transitions end-to-end.
- [ ] Verify publication creates/updates `master_list` and `community_reviews` consistently.
- [ ] Verify unpublishing cannot leave stale public records.
- [ ] Verify poster metadata remains synchronized with published review state.
- [ ] Verify duplicate/reservation checks cover the intended title normalization rules.

## P1 — Profile system

### Current implementation

- [x] Configurable profile questions.
- [x] Question sections.
- [x] Core field overrides.
- [x] Core field ordering.
- [x] Profile section layout.

- [x] Multi-select maximum-selection support.
- [x] A-Z sorting support.
- [x] Image question support.
- [x] Profile-card tag/Q+A/answer-only modes.
- [x] Public profile view.
- [x] Profile-card export formats.

## Next improvements

- [ ] Establish an explicit product-level cap for profile-card tag questions.
- [ ] Establish explicit display caps for multi-select answers on public cards.
- [ ] Add backend validation for `max_selections` and answer shape.
- [ ] Add migration/version metadata for profile-question configuration.
- [ ] Add a safe question-key rename/migration workflow.
- [ ] Add admin preview using representative long/short answers.
- [ ] Test profile cards with extreme names, 20+ tags, long answers and missing images.
- [ ] Verify the public profile honors every `profile_visibility` flag.

## P1 — Review experience

- [x] Published review shelf.
- [x] Review detail pages.
- [x] R/W star visual representation.
- [x] Community NL Rating calculation.
- [x] Community feedback.
- [x] Comments.
- [x] Like interaction.
- [ ] Add automated tests for NL Rating semantics.
- [ ] Add regression test proving reviewer R/W rating is excluded from NL Rating.
- [ ] Verify rating rounding/display consistency across home, shelf, detail and profile cards.
- [ ] Verify broken poster/cover URLs degrade gracefully.

## P1 — Submission workflow

- [x] Required-field progress.
- [x] Open Library search.
- [x] Cover upload.
- [x] Duplicate warning.
- [x] Draft saving/loading.
- [x] Honeypot.
- [x] Quality tips.
- [x] Reservation workflow.
- [x] Five-minute post-submit edit state.

- ☐ Add automated validation tests for all required fields.
- ☐ Verify browser autofill synchronization in Chrome/Edge/mobile Safari.
- ☐ Verify post-submit edit expiry after refresh/navigation.
- ☐ Verify draft privacy/RLS.
- ☐ Verify uploaded covers have predictable storage lifecycle.

## P1 — Community/social

- ☒ Stories.
- ☒ Story likes.
- ☒ Story reposts.
- ☒ Follow/unfollow.
- ☒ Connection privacy.
- ☒ Notifications.
- ☒ Community review likes/ratings/reviews.
- ☐ Test story expiry and signed URL behavior at scale.
- ☐ Verify repost permissions and notification semantics.
- ☐ Verify hidden followers/following never leak through alternate RPCs.

## P1 — Admin

- ☒ Admin hub.
- ☒ Admin management.
- ☒ User management.
- ☒ Review management.
- ☒ Master list.
- ☒ Posters.
- ☒ Reservations.
- ☒ Page moderation.
- ☒ Finance modules.
- ☐ Add audit log for sensitive admin mutations.
- ☐ Add explicit role model if multiple admin privilege levels are needed.
- ☐ Add bulk-action confirmation summaries.
- ☐ Add export/reporting for editorial operations.

## P2 — Analytics

- ☒ Live aggregate analytics RPC.
- ☒ Animated counters.
- ☒ Contributor highlighting.
- ☒ Language counts.
- ☒ Community engagement metrics.

- ☐ Define a stable analytics schema/version.
- ☐ Add date-range analytics if required.
- ☐ Add monitoring for RPC latency/errors.
- ☐ Ensure analytics remains fast on large review datasets.

## P2 — Monetisation

- ☒ Adsterra 300x250 placement component.
- ☒ Sponsored label.
- ☒ Finance module links.
- ☐ Verify the Adsterra unit key/configuration in production.
- ☐ Measure ad viewability without collecting unnecessary personal data.
- ☐ Document future payment provider integration boundary.
- ☐ Keep monetisation surfaces visually separated from editorial trust signals.

## P2 — Content management

- ☒ Editable About sections.
- ☒ Editable legal pages.
- ☒ Editable cookie banner.
- ☒ Editable review guidelines.
- ☒ Editable profile configuration.
- ☐ Add content revision history.
- ☐ Add draft/publish state for public copy if multiple admins will edit.
- ☐ Add rollback for accidental content changes.

## P2 — Testing

- ☐ Add unit tests for `computeNlRating`.
- ☐ Add unit tests for review status transitions/helpers.
- ☐ Add tests for profile-question selection limits.
- ☐ Add tests for `answerText/decodeOtherAnswer` behavior.
- ☐ Add tests for URL sanitization.
- ☐ Add tests for profile-card overflow/fitting logic.
- ☐ Add end-to-end tests for `auth → submit → admin → publish → public review`.
- ☐ Add end-to-end tests for `profile → public profile → export`.
- ☐ Add accessibility smoke tests.

## P3 — Architecture improvements

- ☐ Introduce a formal schema/type generation strategy for Supabase data if the project grows.
- ☐ Separate domain services from presentation helpers more strictly as modules expand.

- ☐ Add central query/cache policy if data volume grows.
- ☐ Consider a formal router only if hash routing becomes a maintenance bottleneck.
- ☐ Add structured logging/observability for production errors.

## Definition of done

A feature is done when:

1. Product behavior is documented.
2. Authorization and data validation are verified.
3. Light/dark and mobile layouts are checked.
4. Loading/error/empty states exist.
5. Accessibility basics are satisfied.
6. typecheck, lint and build pass.
7. Relevant regression tests are added or updated.
8. TASKS.md is updated.

### 1.41

- ☒ Built-in profile fields shown as editable, drag-sortable section columns in the profile admin.
- ☒ Built-in fields can move between Reader identity and Reading journey (section override).
- ☒ Section-tile drag hardening (Firefox button-in-draggable, gap drops, optimistic order, reload on failure).
- ☐ Verify in production: drag a built-in field across sections, reload the reader profile, confirm placement, saved values and card export.
- ☐ Run `npm run typecheck`, `npm run lint`, `npm run build` (not run in the authoring sandbox: no network for `npm install`).

### 1.42

- ☒ Reading Journey conversion into a real question section (admin button, idempotent).
- ☒ Published-count card moved to Identity.
- ☒ Reader/public profile bridge for converted reading questions.
- ☐ Verify in production: click Convert, check section + 6 questions appear, edit/drag one, confirm a reader's old answers still show on their profile and card, hide one question and confirm its card row disappears.
- ☐ Run `npm run typecheck`, `npm run lint`, `npm run build` (not run in the authoring sandbox: no network for `npm install`).

### 1.60

- ☒ Compulsory verdict question on the submit form (Perfection / Go for it / Timepass).
- ☒ Verdict carried through submit -> accept (master\_list) -> publish (community\_reviews), written only when set.
- ☒ Indigo/violet verdict banner with per-verdict SVG on review page, feed cards and submit preview.
- ☒ `sql/verdict_column.sql` (idempotent, nullable, no default, NOT VALID CHECKS).
- ☐ Run `npm run typecheck`, `npm run lint`, `npm run build` (not run in the authoring sandbox: no network for `npm install`).

- ☐ Optional: backfill `master_list.verdict` for old reviews, then republish; add verdict to profile review RPCs.

## 1.75

- ☒ Added separate average R/W Rating star tile alongside average NL Rating on profile cards.
- ☒ Improved card Q&A box hierarchy and text wrapping for less cramped, more polished cards.
- ☒ Removed reader-controlled card question picks and Tag/Answer selection; the admin controls Tag/Answer format.
- ☒ Limited Advanced Reader card questions to the first two questions; other advanced/late-section answers render beneath the public profile card when public.
- ☒ Removed the “Show on profile card” toggle from the admin question editor while retaining the legacy schema field for compatibility.
- ☐ Run `npm run typecheck`, `npm run lint`, and `npm run build`; verify profile card exports and public privacy behavior in deployment.
